Aspiring Software Engineer | Python Developer | Data Analyst

PROFESSIONAL EXPERIENCE

[LG Soft India](#)

Research Engineer Intern

September 2024 – April 2025

- Automated audio playback analysis using Python scripts, detecting silent intervals across 15+ languages and generating .txt reports, reducing QA time and improving Alexa test coverage by 30%.
- Built post-processing tools to parse test outputs and compile summary tables, identifying language-wise validation status for different audio modules.
- Enabled efficient debugging by automating report generation and improving insight into failed cases, enhancing test coverage and reducing manual effort.
- Worked in an agile environment, collaborating closely with QA and development teams to resolve complex test cases and enhance overall system reliability.

PROFESSIONAL SUMMARY

Aspiring Software Engineer and Python Developer with a solid foundation in Information Science with CGPA: 8.26, SJCE. Experienced in developing scalable solutions and process automation, including an internship at LG Soft India, where I enhanced workflows for Amazon Alexa. Skilled in Python, C++, and cloud technologies, I am eager to contribute to innovative projects in a collaborative environment.

EDUCATION

JSS Science and Technology University (Formerly SJCE), Mysore

2021-2025

Bachelor of Engineering, Information Science – 8.26 CGPA

Vivekananda PU College Nehru Nagar Puttur

2019-2021

State Board - PCMB - 90%

PROJECT

[Bilingual Voice-Enabled Medication Adherence Platform](#)

- Engineered a voice-enabled bilingual platform (English/Kannada) using React and Firebase, streamlining patient symptom logging via audio/text, aiding accessibility in rural healthcare.
- Boosted medication adherence by 85% and reduced hospital readmissions by 15% via real-time symptom tracking and automated medication alerts.

- Integrated secure auth & scalable cloud storage using Firebase and GCP, facilitating 24/7 doctor-patient data access and improving rural outreach.

Hospital Management System

- Architected a full-stack system with PHP, MySQL, JavaScript, HTML5, CSS3, and Bootstrap, streamlining patient, doctor, and admin workflows.
- Implemented appointment booking, patient registration, and dashboard functionalities, improving operational efficiency.
- Implemented secure login and dynamic search features, and enabled PDF generation of reports using TCPDF.

Spam Email Detection System

- Developed a spam detection engine using Multinomial Naive Bayes, achieving 95% accuracy on 5,000+ emails through optimised NLP pipelines.
- Enhanced model performance with custom preprocessing using SpaCy and CountVectorizer, improving token quality and reducing false positives.
- Designed an interactive Streamlit frontend for the spam detection model, enabling real-time input, prediction, and visualisation of spam classification results.

TECHNICAL SKILLS

Languages: Python, C++, JavaScript

Web & API Development: REST APIs, Flask, Basic FastAPI, Streamlit

System Programming: C++, Data Structures & Algorithms, OS Concepts

Cloud & DevOps: AWS, Firebase, Google Cloud Storage (GCS)

Databases & Tools: MySQL, SQL Server, Git, VS Code

Concepts: Object-Oriented Programming (OOP), Cloud Computing, Data Mining, Computer Networks

AI & Data Science: Familiarity with AI/ML, NLP, data preprocessing, model evaluation (Scikit-learn, spaCy, Pandas)

Voice & Audio Processing: Google Speech-to-Text API, gTTS, PyQt5, pydub.

ADDITIONAL INFORMATION

- **Certifications:**

[REST APIs with Flask and Python](#)

- **Languages:**

English (Professional), Kannada (Native), Tulu (Fluent)

- **Interests:**

Adventures, Outdoor Activities, Community Volunteering
